PROFESSIONAL SUMMARY

Motivated Computer Science undergraduate majoring in Network and Information Security at De La Salle University, with hands-on experience in network programming, digital forensics, and phishing detection research. Equipped with strong foundations in log analysis, network traffic monitoring, and Python-based security tooling through academic projects and CTF competitions. Eager to apply analytical and problem-solving skills as an entry-level cybersecurity intern, particularly in SOC and blue team roles.

EDUCATION

De La Salle University – Manila September 2023 – Present
Bachelor of Science in Computer Science, Major in Network and Information Security
4th Year Undergraduate (A.Y. 2026–2027)
Thesis: Obfuscation-Aware Feature Engineering for Evasion-Heavy Phishing URL Detection
Honors & Awards: First Honor Dean's Lister (A.Y. 2023–2024 Term 2; A.Y. 2025–2026 Terms 2 & 3); Second Honor Dean's Lister (A.Y. 2023–2024 Term 3; A.Y. 2024–2025 Terms 1–3); Department of Science and Technology (DOST) SEI Scholar

Aurora National Science High School September 2021 – July 2023
Senior High School, STEM Strand • Graduated with Honors • Special Award in Science

ACADEMIC & PRACTICAL PROJECTS

- **Concurrent Syslog Analytics Server ("Mini-Splunk"):** Constructed a high-throughput, multi-threaded server for real-time syslog ingestion and log analysis
- **SAM Python Parser:** Programmed a forensic parser to decode Windows SAM registry hives for account auditing
- **USB RegParse:** Developed a forensic parser to extract Windows USB registry artifacts for device history tracking
- **Broadcast & Multicast Traffic Monitor:** Developed a raw-socket network monitor to capture and decode broadcast and multicast traffic
- **Voice over IP (VoIP) Peer-to-Peer Audio Communication System:** Built a custom Python VoIP system with SIP/SDP signaling, RTP streaming, and RTCP telemetry
- **Magnet Virtual Summit 2026 Capture the Flag:** Solved digital forensics CTF challenges across disk and memory captures and cryptography
- **F-Max and I-Max: Distributed Feature and Instance Optimization for Phishing URL Detection**: Developed F-Max, a distributed Forward Feature Selection system that reduced dataset dimensionality by 72% while retaining 93.65% classification accuracy using a 5-feature subset

SKILLS & INTERESTS

Technical: C, Java, Python, Bash, Assembly; HTML, CSS, JavaScript, Handlebars; MySQL, MongoDB
Tools: Git, Wireshark, VMware Workstation, Visual Studio Code, PyCharm, Dev-C++, Arduino IDE, Splunk Enterprise
Operating Systems: Windows, Linux
Language: English, Filipino
Interests: Cybersecurity (Blue Teaming, SOC), Networking, Machine Learning, Going to the Gym, Gaming

CERTIFICATIONS

Google Cybersecurity Professional Certificate | Coursera 2026
